Name	Ryosuke Hujisawa	Previous work	free-lancer										
Station	JR Kawasaki station	Age	22										
Time	full time	Wife or kids	-										
Time	Japanese English Exam Level 2	Professional	Web/Mobile										
Qualification	Web/Mobile												
Skill	Ruby, ReactNative, Go												
PR	Thank you for looking at the skill sheet. I have been working as a programmer specializing in web / mobile for the past 5 years. After 4 years of full-time employment, I started working as a freelance engineer about a year ago. When I working as a full-time employee, I worked often within a medium-sized to large-scale development team, and after I became freelance, I worked often within to small- to medium-sized development team.From a technical point of view, I have the longest career as a Ruby on Rails engineer about 4 years of experience, and I also can say good at about React Native and Go. I am 100% Professional web / mobile implementation, API development, test automation to automated deployment. In addition, it can perform a wide variety of tasks such as infrastructure construction (AWS), DB operation, Unix command operation. Thank you !

1	2015/3/1 - 2015/12/30 (9 months) [React Native / Go chat app development] ■Overview We undertook the development of a multi-platform chat app using React native and Go. The concept is like "a simple version of LINE that can be used by family members who live far away". about easy to use for UI and UX I made it very carefully ■Assignment ・ Routing and screen transition ・ Display alert pop-up and Push notifications to users ・ connect Apps and DB each other general	I was assigned to the project as a full-time employee. I worked as a programmer and worked with a team of 7 engineers and 2 designers.	Javascript/Go	React Native	MongoDB	Android iOS Ubuntu	×	×	×	○	○	○	○
3	2016/1/3 - 2016/8/30 (7months) [Reception application] ■Overview We have developed a reception app. We decided to reject all the existing applications that have been released and make everything by ourselves. As a result, the technical capabilities of a system company were appealed, and at the same time, it was possible easily connect to complex technical demands. ■Assignment ・ Routing and screen transition ・ Screen design ・ Communication between application and server ・ Cooperation with Slack / ChatWork API ・ Implementation of management screen	I was assigned to the project as a full-time employee. I worked as a programmer and worked with a team of 2 engineers and 1 designers.	Javascript/Go	React Native	MongoDB	iOS ChatWork API Slack API	○	○	○	○	○	○	○
3	2016/8/30 - 2017/4/30 (8months) [Stripe payment application development] ■Overview I developed introduced and operated a payment system at Stripe. It has modified the that was already implemented and operated by Ruby on Rails. Previously payment system that was originally created by customers. We have replaced them all with Stripe. ■Assignment ・ Single payment ・ Monthly settlement ・ Retention of credit card information (irreversible tokenization) ・ Issuance and application of coupon codes (discounts) ・ Multi currency support ・ Currency conversion ・ Set first settlement date ・ Change to paid / free plan ・ Receipt issuance and management	I was assigned to the project as a full-time employee. I worked as a programmer and worked with a team of 4 engineers.	Ruby	Ruby on Rails Stripe	PostgreSQL	EC2 S3 Ubuntu	○	×	×	○	○	○	○
4	2017/5/1 - 2017/8/30 (3months) [Chatbot app development] ■Overview I have developed a Slack / ChatWork chatbot. It was work to improve the efficiency of office work and development work. I developed something like a work automation system to improve the efficiency of internal operations. ■Assignment ・ Automatic deployment to production environment ・ Automatic deployment to staging environment ・ Automated time stamps ・ App error notification ・ Manage PR status / Random assignment of PR reviewers ・ Get app server error, write to file and notify slack ・ Always write application log to file and notify slack ・ Detects label change and notifies Slack ・ In-house library collection management (loan / search / reservation) ・ Manual test implementation from slack by command input	I was assigned to the project as a full-time employee. I worked as a programmer and worked with a team of 2 engineers.	Ruby	-	PostgreSQL	EC2 S3 Slack	○	○	○	○	×	×	×
5	2017/9/1 - 2018/5/30 (6months) [Web API development] ■Overview I develop API for mobilization with Ruby on Rails. It was a CtoC sharing economy service that was already implemented and operated as a web service. ■Assignment ・ Routing, endpoint design ・ HTTP method design (* GET * POST * PUT * PATCH * DELETE) ・ Formatting and returning JSON at the default time ・ The request body at the time of addition / update adopts JSON in key & value format. ・ Implementation of SSL communication ・ Filter / sort / search is request parameter design ・ Introduction of token authentication (other than new registration and login) -Insert request restriction information in response header -Put cache information in response header -Create error message return (400 series 500 series) ・ Effective use of HTTP status codes (200 to 429)	I was assigned to the project as a freelancer. I experienced project management as a team leader, and I assigned the engineer appropriately, and managed the task effort estimation, leading the project to success.	Ruby	Ruby on Rails	PostgreSQL	Heroku S3 Ubuntu	○	○	○	○	×	×	×
6	2018/6/1 - 2018/12/30 (6months) [Developed EC site for cosmetics] ■Overview I developed an EC site for a cosmetic manufacturer. I adopted Stripe as a payment system. From member registration to cart implementation, I made it from scratch. ■Assignment ・ Porting CSS design to Rails ・ Member registration and login ・ Kart and Stripe ・ Create a blog with markdown from the admin screen ・ "Shipped", "My Page", "Favorites", etc. on the user page ・ Registration with social media ・ DB design ・ AWS design and operation	I was assigned to the project as a freelancer. I did a lot of work besides program development. Like Increase brand value through advertising strategies, Brand awareness through content marketing, Sales marketing using social media and influencers. I learned How to fight as a weak using Lanchester Strategy. Finally, I learned how to sell and contributed greatly to the company's sales.	Ruby	Ruby on Rails	MongoDB	EC2 S3 Ubuntu	○	○	○	○	○	○	○
7	2019/1/1 - 2019/9/1 (6months) [Financial platform development] ■Overview I was working on something like a "life plan". This is a financial platform for "financial planning" that helps comprehensive life planning from an economic perspective. This is a BtoBoC app used by financial planners. I was mainly for bug fixes and function additions of services that were already implemented and operated. ■Assignment ・ Additional processing and refurbishment of model controllers ・ Examination of existing logic ・ Test introduction ・ Refactoring ・ Formatting and organizing returned values in Mongo and JSON	I participated in the business as a freelancer. I worked on the project management as a team leader. Engaged in engineer assignment, task man-hour estimation, subcontract management, internal resource management / task allocation, project progress, and worked on product development with 5 engineers and 2 designers.	Ruby	Ruby on Rails	PostgreSQL	EC2 S3 Ubuntu	○	○	○	○	×	×	×
8	2019/1/1 - 2019/4/30 (3months) [Develop question and discussion services like Quora] ■Overview This is a question and discussion service that people can ask questions about foreign languages and foreign cultures. I actually have been lived in Canada and I loved foreign languages and foreign cultures. So I made an app platform about foreign cultures and languages. (https://www.countryboard.org/)	Started development as a personal project	Ruby	Ruby on Rails	PostgreSQL	Heroku S3 Ubuntu	○	○	○	○	×	×	×
9	2019/5/1 - 2019/9/30 (4months) [Blog writing services like Medium] ■Overview This is a service that makes it easy to blog like Medium. I am interested about medical industry and wanted to create a platform where people could easily make medical blog. (https://www.finddoctor.jp/)	Started development as a personal project	Go	Iris	MongoDB	EC2 S3 Ubuntu	○	○	○	○	×	×	×
